## Context

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

### Context - General

- Increased adoption of BIM across the Irish AEC sector
- Core objective of BIM is to invoke collaboration to enabling better decision making
- Fast evolving technology, within fluid processes, are challenging existing professionals
- Perceived demand for BIM literate graduates
- Integration into the AEC curricula is critical to the implementation of BIM

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

### Context - Challenges

- Industry possibly leads academia when it comes to BIM
- Industry application proficiency needs often conflict with academic focus on disciplinary principles
- Optimum approach to integrating BIM, both within and across disciplines, is lacking
- 'No room' is a significant reported barrier to BIM adoption in education

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

CitA  
BIM GATHERING

### Research objectives

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

### Research Objectives

With the **BEng (Honours) Degree in Structural Engineering at Cork Institute of Technology**, as the 'test bed', the research seeks to:

- Contribute to the existing, but limited, body of knowledge
- Develop a programme wide integration framework
- Describe the evolution of the implementation programme

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

Cita BIM GATHERING

### Survey

- Part of a larger study related to structural engineering education
- Four stakeholder groups considered:
  - Students - **Graduate Engineers** - **Chartered Engineers** - Academics

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

Cita BIM GATHERING

### Survey of Graduate Engineers

*Which structural drafting/modelling software options they had used in their postgraduate experience to date?*

Autodesk AutoCAD	96%
Autodesk Revit	52%
Tekla Structures	34%
Tekla Structural Designer	24%
Other	12%
Bentley Microstation	6%

0% 50% 100%

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

Cita BIM GATHERING

### Survey of Graduate Engineers

*What specific purpose was the software is used for?*

Development of 2D drawings	78%
Development of 3D model and associated 2D drawings	47%
Development of 3D model for transfer to structural analysis and design software	41%
Development of 3D model, associated 2D drawings, and model transfer to structural analysis and design software	35%
Other	2%

0% 50% 100%

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

### Survey of Chartered Engineers

*What issues do graduates experience in undertaking computational analysis and design?*

- *“Understanding what is an appropriate level of detail to model”*
- *Trying “to model everything in 3D right away, when there may not be a need to over-complicate the model [as] sub-frames or 2D models would be more appropriate”*
- *“Diving straight into creating a model without spending some time planning the best approach” was advised against in order to prevent development of “models that are too complex too early without understanding the layers of complexity”*

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

### Survey of Chartered Engineers

*What is the correct course of action?*

- *“Important to help the undergraduates to learn the use of software in the right context”, while “having the fundamentals correct”*
- *“Software should be used only to aid the student's understanding of engineering principles, not improve software skill levels, i.e. education is for knowledge generation, not skill development. Those with robust understanding will learn software skills quickly in the work place”*

**Synthesis of opinions suggest that software analysis should be taught in tandem with first principles and approximate analysis**

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

### Industry Focus Groups

- Focus groups included practicing engineers at all levels, including graduates, project engineers, senior engineers and company directors
- General agreement with the sentiment that digital tools should be incorporated into undergraduate education
- Caveat articulated was that integration should not be at the expense of technical competencies

**Synthesis of focus group opinions support survey findings**

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

CitA  
BIM GATHERING

### Implementation Framework

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

## Implementation Framework

- Challenge was to evolve a largely traditional curriculum
- Developed framework is cognisant of academic programme design requirements
- Variety of pedagogical approaches
- Implementation was phased
- Curriculum integration was calibrated to align with the intellectual maturity of the learner
- Lack of 'room' issue had to be balanced with the necessity to retain technical competence

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

## Implementation Framework

**Phase 1 – Year #1**

Focuses on the people aspect by developing student abilities to successfully undertake and complete collaborative group projects

**Phase 2 – Year #2**

Technology intensive, with a largely instructional pedagogical approach

**Phase 3 – Year #3**

Seeks to reinforce people and technology aspects of BIM while introducing elements of process. This is achieved by adopting a more constructivist learning approach which takes the form of a group design project

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

## Implementation Framework

**Phase 4 – Year #3**

Examines potential benefits of adopting a BIM approach within the discipline of Structural Engineering

**Phase 5 – Year #4**

Investigates the fundamentals which underpin BIM, presented via theory discourse as part of a module which also addresses management strategies and leadership

**Phase 6 – Year #4**

Provides the opportunity for engagement in a multi-disciplinary team project

BIM Gathering 2017, Croke Park, November 23rd & 24th, 2017

Building Capabilities  
in Complex Environments

CitA  
BIM GATHERING

## Programme Integration

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA BIM GATHERING

### Year #1

*Creativity, Innovation & Teamwork*

- Students work in teams
- Projects vary in size and type
- Students' skills (e.g. communication, teamwork) and attitudes (e.g. motivation, ethics) are developed.

BIM Gathering 2017, Croke Park, November 23<sup>rd</sup> & 24<sup>th</sup>, 2017

Building Capabilities in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA BIM GATHERING

### Year #2

*Structures & Design*

- Learners receive step-by-step instruction
- Direct questions and feedback opportunities
- Supported with audio-video tutorial material

BIM Gathering 2017, Croke Park, November 23<sup>rd</sup> & 24<sup>th</sup>, 2017

Building Capabilities in Complex Environments

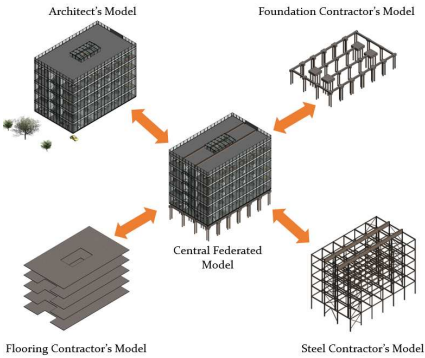

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA BIM GATHERING

### Year #3

*Structural Steel & Timber Design 2*

- Group design project
- Groups required to design the steel element of multi-contract design and build project
- A 'just-in-time' teaching approach is adopted
- Challenge is for 'teacher' to develop models of 'other' project stakeholders
- Individuals required to reflect and synthesise a strategy for improving performance

BIM Gathering 2017, Croke Park, November 23<sup>rd</sup> & 24<sup>th</sup>, 2017

Building Capabilities in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA BIM GATHERING

### Year #3

*Digital Structural Engineering*

- Module focuses on the exploitation of the BIM model information in the development of the Structural Information Model (SIM).
- Students are required to develop 3D object-based models, including models of existing conditions based on point cloud data
- Digital tools in the execution of BS/PAS 1192 compliant BIM processes
- Progressive lessening of tutor delivered instruction serves to further transfer responsibility for learning to the student
- Developing self-directed learning capabilities is crucial given the fast paced evolution in technology
- Industry professionals deliver guest lectures

BIM Gathering 2017, Croke Park, November 23<sup>rd</sup> & 24<sup>th</sup>, 2017

Building Capabilities in Complex Environments

**CitA**  
BIM GATHERING

Year #3  
Digital Structural Engineering  
Challenges include:

- Three different software applications within one module
- Ensuring that learners are not using the powerful and very capable software solutions to an end that is beyond their current knowledge levels, as all output must be verified and validated.
- Efficiency of transferring from BIM to SIM is instantaneously impressive but the myriad of interoperability issues which arise follows almost immediately,

Year #4  
Project Management & Leadership

- Fundamentals which underpin BIM are presented
- Students identify, summarise and critique a published BIM case study
- Assesses learner knowledge, understanding and attitudes towards BIM
- Approach seeks to extend the students' own learning experiences to the wider industry context

BIM GATHERING

Year #4  
*Design Office*

- Final year (Level 8) structural engineering and architectural technology students work in groups
- Project is worth 10-15% of overall module grade (Module is worth 5 ECTS)
- Each group is presented with a project brief
- Groups collaboratively undertake the concept stage (i.e. Stage 2 according to PAS 1192-2)
- All information is required to be managed in accordance with BS/PAS 1192 series of standards

BIM Gathering 2017, Croke Park, November 23<sup>rd</sup> & 24<sup>th</sup>, 2017

Building Capabilities  
in Complex Environments

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

Year #4  
*Design Office*

Focus on the early phases of a project are twofold:

- 1) Time constraints within courses thus restricting scope to undertake a more complete design.
- 2) Placing emphasis on increased effort earlier in a project timeline is fundamental to a BIM approach, as it enables greater flexibility in decisions as illustrated by the MacLeamy curve

**The 'holy grail' if expanded to include other disciplines!**

BIM Gathering 2017, Croke Park, November 23<sup>rd</sup> & 24<sup>th</sup>, 2017

Building Capabilities  
in Complex Environments

CitA  
BIM GATHERING

Conclusions

Integrating BIM into a Structural Engineering curriculum – From absent to infused

CitA  
BIM GATHERING

Conclusions:

- Research presents example of full curriculum integration within a Structural Engineering programme
- Responsibility for learning is progressively transferred to the student
- Achieved by altering the facilitation and removing the scaffolds
- Anticipated legacy is effective lifelong learners

**.... this is perhaps the most significant learning outcome, as BIM is a fast developing phenomenon!**
