

Quality Planning in Construction Projects to get it right first time

By: Alice Kavanagh

Introduction

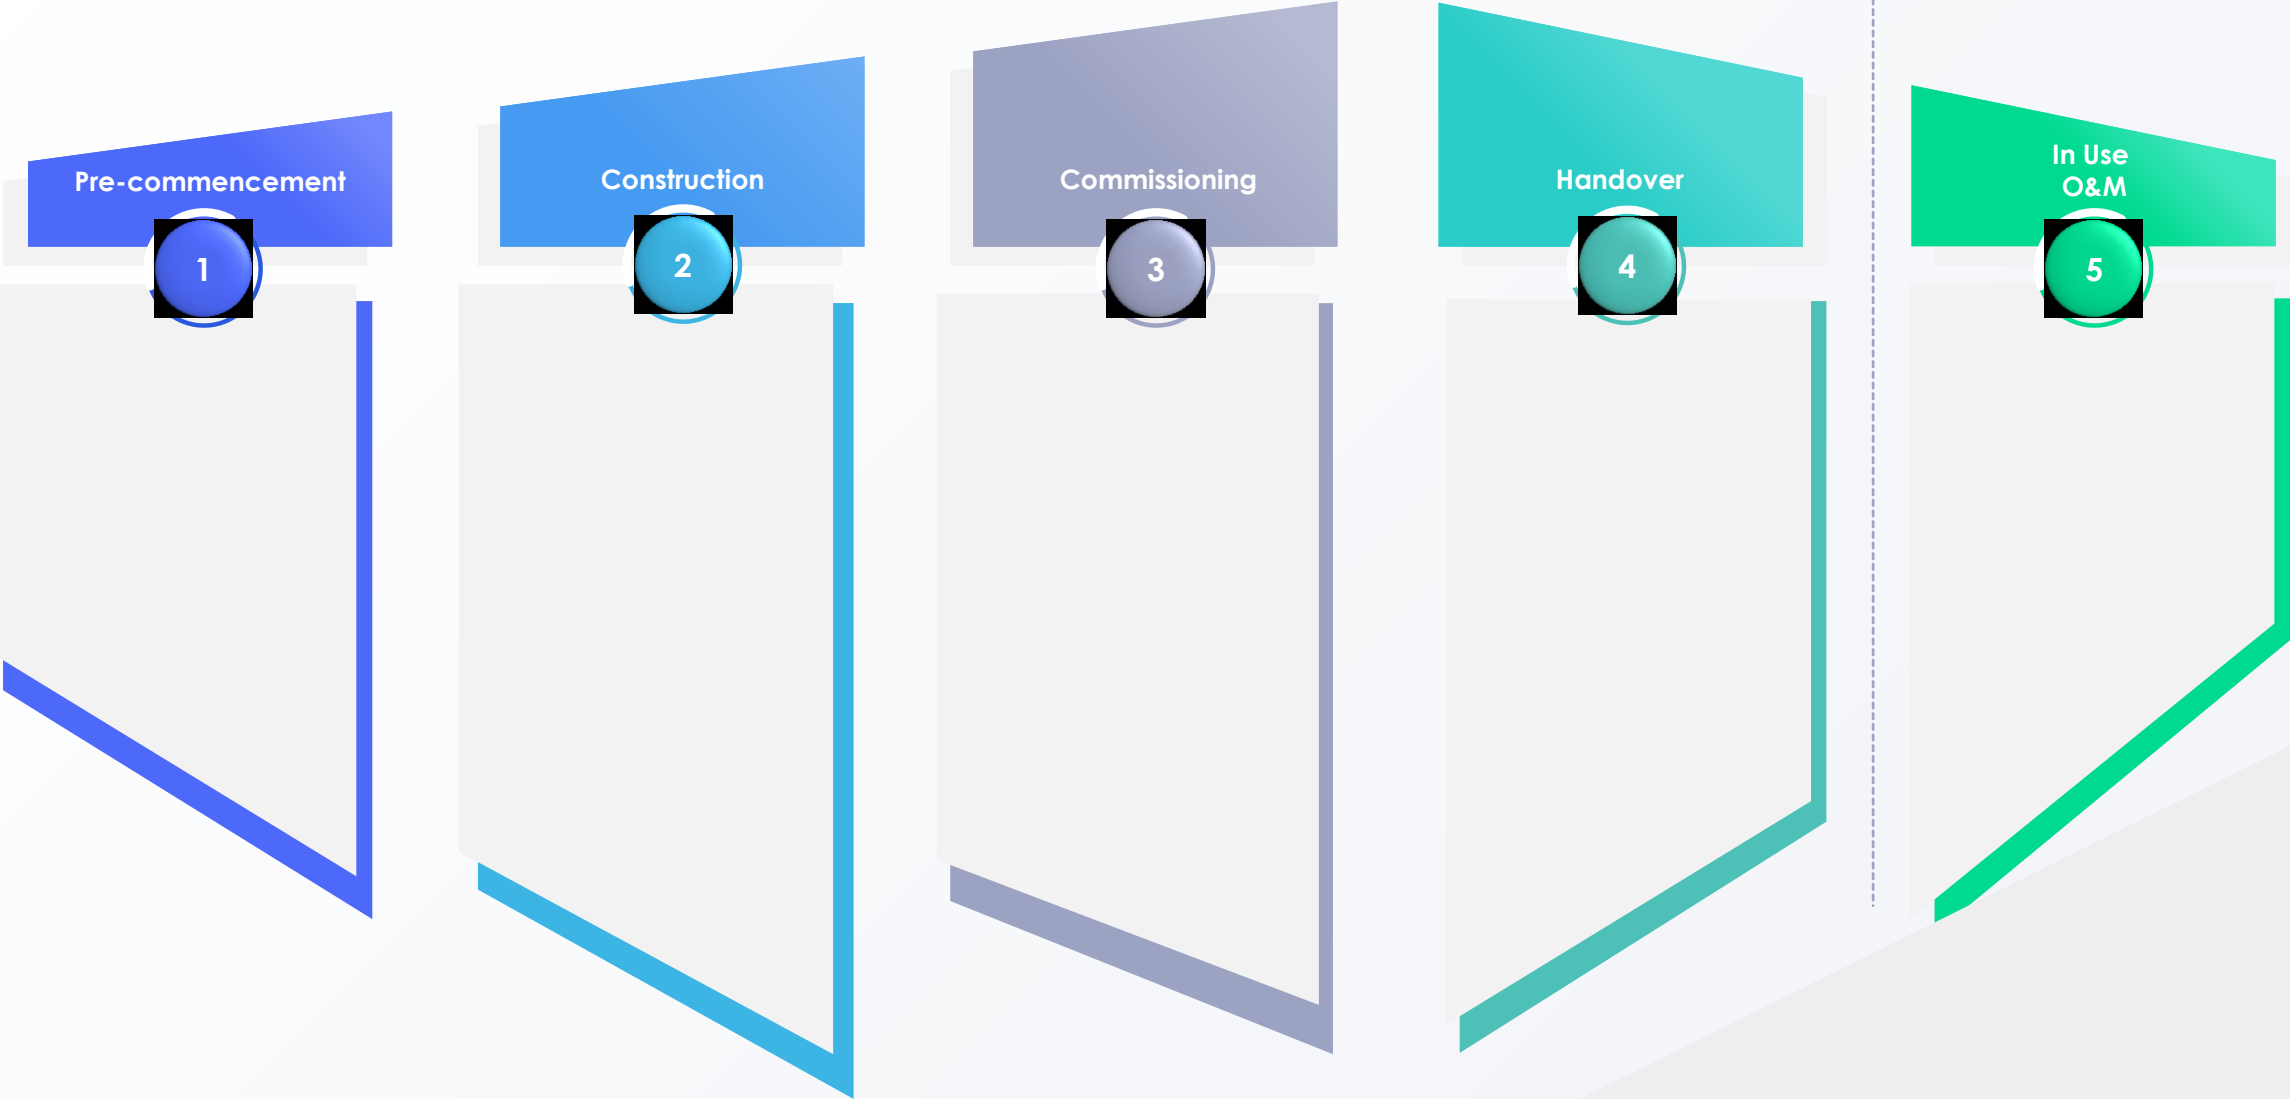

The Importance of Effective Quality Management in Construction

Overview Quality Management Activities - Quality throughout the Phases

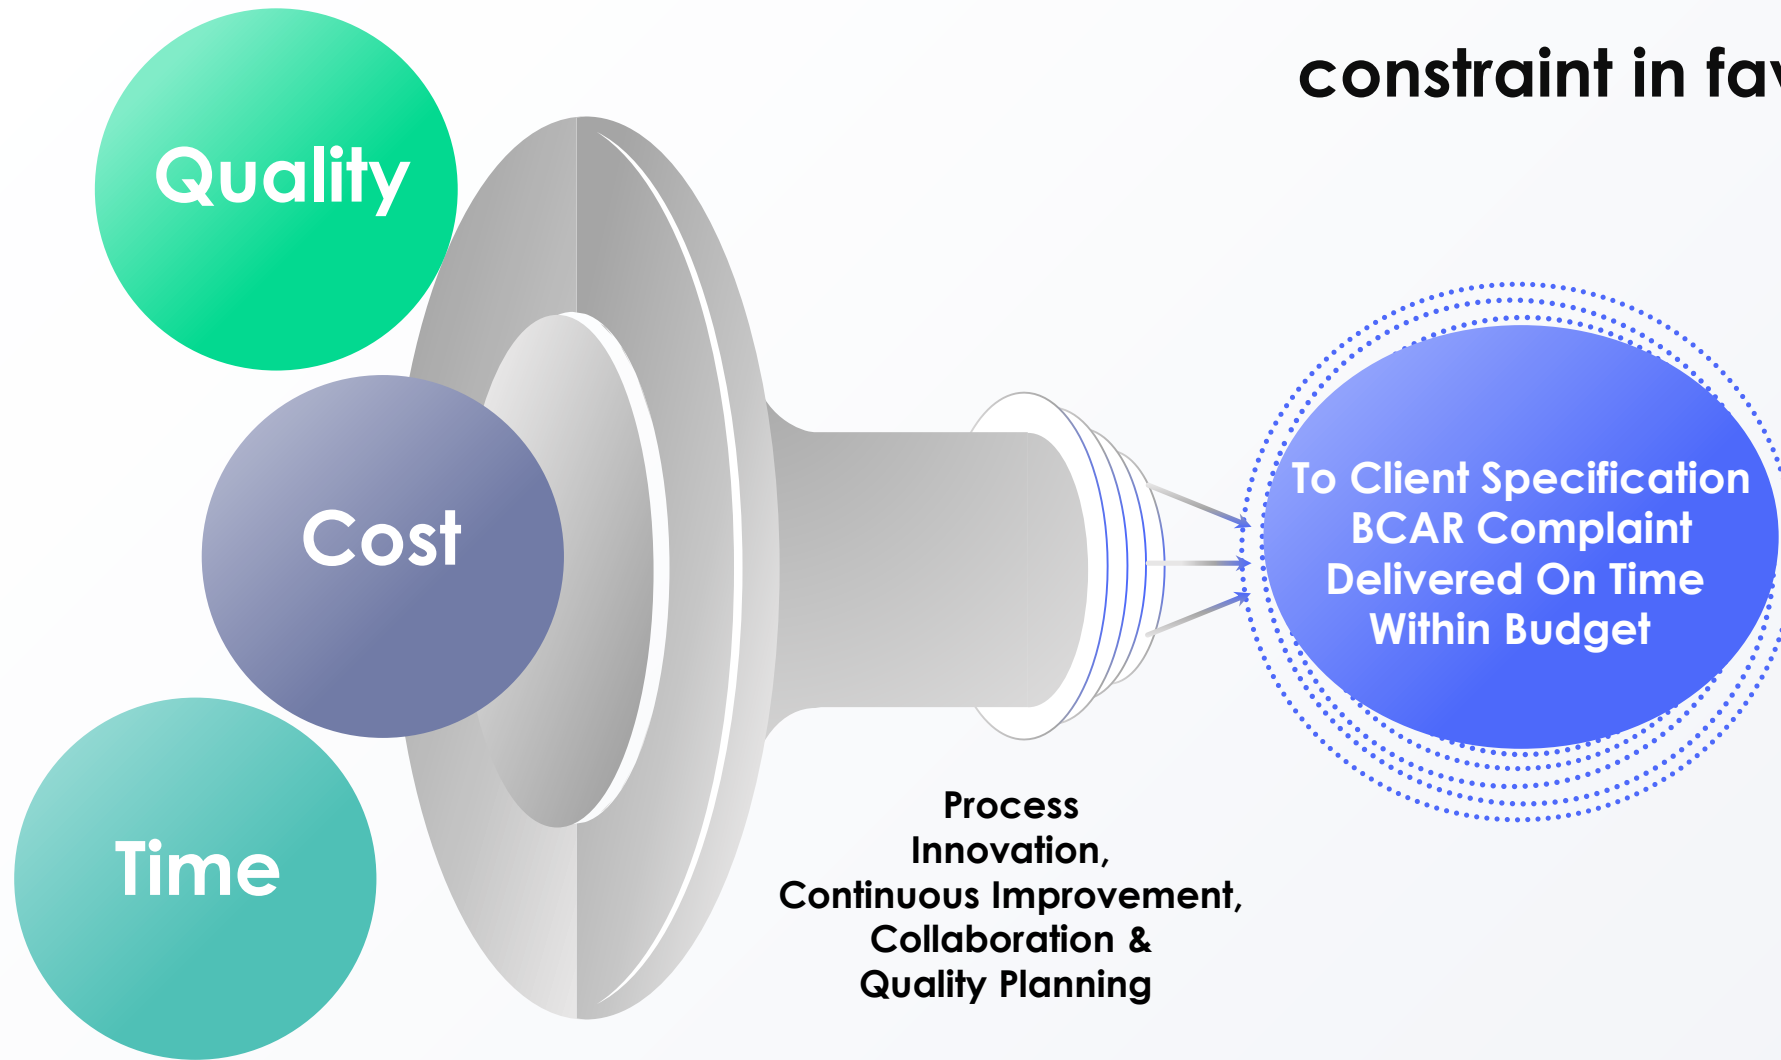

Integrated Project Quality Management
Designing, Constructing, Verifying & Testing

Delivering to Client

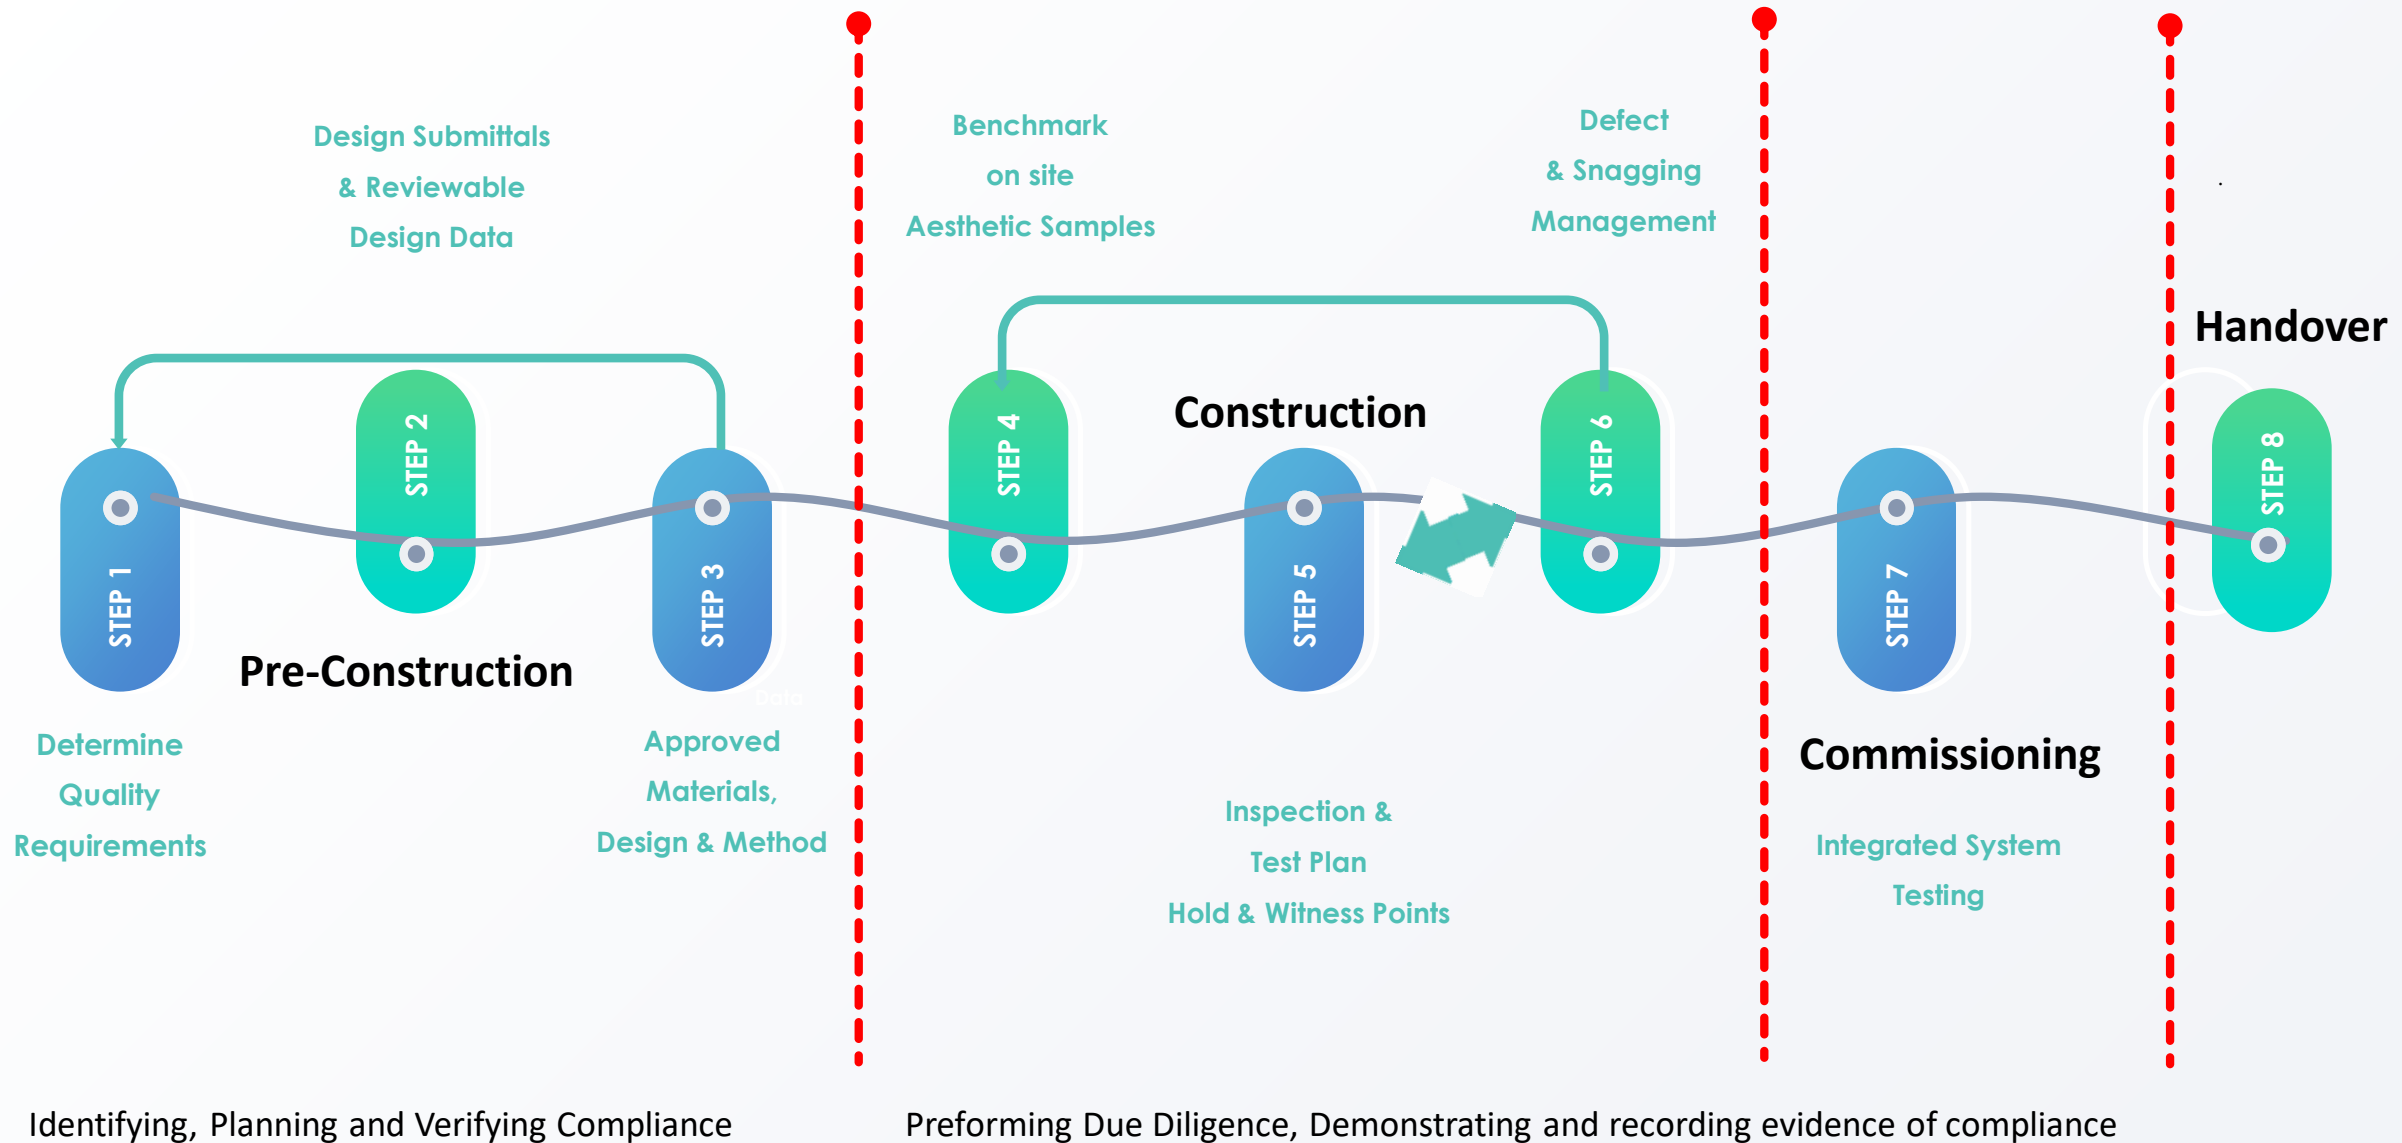

Full Lifecycle Management

How do we balance the triple constraint in favor of Quality?

Mapping out the Critical Quality Activities and Key Quality Gates

Leadership is not an expertise but a continued education....

I am currently working with AIT in the Course Design of Quality Engineering, BCAR and Project Quality Management Courses

These will be accredited courses and provide the learners with the right skills to excel in the field and the qualification to get there.

Learning and Training at all levels – Level 8, 7, 6 and Professional CPD with credits towards future studies

Thank you
