- GDA since 2016
- Information Manager since 2012
- 3D information author since 2009
- construction industry since 1995
- CEN/TR 17654:2021 Co Author
- LCi Public Sector, Task Force lead
- NSAI Building Information Modelling, Committee member
- Public BIM, Co founder

Grangegorman

Our Mission

The GDA's mission is to transform Grangegorman into a vibrant community that encompasses a world class, integrated and inclusive education, health, and community campus. This will be achieved by delivering a built environment that is in keeping with the Grangegorman Masterplan Vision.

Our Vision

The Agency's vision is to be locally and internationally recognised as an exemplar of community urban regeneration, focused on education and health.

Our Values

- Collaboration
- Delivery focussed
- Design quality
- Integrity
- Sustainability

5.2 Information management process — Invitation to tender

5.2.1 Establish the appointing party’s exchange information requirements

The appointing party shall establish their exchange information requirements to be met by the prospective lead appointed party during the appointment.

In doing this, the appointing party shall:

- a) **establish the appointing party’s information requirements** to be served during the appointment, and in doing so shall consider their:
 - organizational information requirements,
 - asset information requirements, and
 - project information requirements;
- b) **establish the level of information need** required to meet each information requirement;
NOTE Other metrics to describe the status of information, such as level of accuracy, can be added to these metrics as considered appropriate.
- c) **establish the acceptance criteria** ~~for each information requirement, and in doing so shall consider:~~
 - the project’s information standard,
 - the project’s information production methods and procedures, and
 - the use of reference information or shared resources provided by the appointing party;
- d) **establish the supporting information** ~~that the prospective lead appointed party might need, to fully understand or evaluate each information requirement or its acceptance criteria, and in doing so shall consider:~~
 - existing asset information,
 - shared resources,
 - supporting documents or guidance material,
 - references to relevant international, national or industry standards, and
 - exemplars of similar information deliverables;
- e) **establish the dates,** relative to the project’s information delivery milestones and appointing party’s key decision points, that each requirement has to be met, and in doing so shall consider:
 - the time needed by the appointing party to review and accept information, and
 - the appointing party’s internal assurance processes.

CEN/TR 17654:2021 (E)

5	Exchange information requirements (EIR)
5.1	General
5.2	Information requirements
5.3	Level of information need
5.4	Acceptance criteria
5.4.1	General
5.4.2	Project's information standard
5.4.3	Project’s information production methods and procedures
5.4.4	Project's reference information and shared resources
5.5	Supporting information

BEP - Methodology for the production, management and use of information

BS EN ISO 19650-2:2018
ISO 19650-2:2018

5.3.2 Establish the delivery team’s (pre-appointment) BIM execution plan

The prospective lead appointed party shall establish the delivery team’s (pre-appointment) BIM execution plan, to be included within the prospective lead appointed party’s tender response.

In doing this, the prospective lead appointed party shall consider:

- a) the proposed names and professional résumés of the individuals who will undertake the information management function on behalf of the delivery team;
- b) the delivery team’s information delivery strategy, containing:
 - the delivery team’s approach to meeting the appointing party’s exchange information requirements,
 - a set of objectives/goals for the collaborative production of information,
 - an overview of the delivery team’s organizational structure and commercial relationships, and
 - an overview of the delivery team’s composition, in the form of one or more task teams;
- c) the proposed federation strategy to be adopted by the delivery team;
- d) the delivery team’s high-level responsibility matrix, containing the allocated responsibility for each element of the information model and the key deliverables associated to each element;
- e) any proposed additions or amendments to the project’s information production methods and procedures that the delivery team require to facilitate the effective:
 - capture of existing asset information,
 - generation, review, approval and authorization of information,
 - security and distribution of information, and
 - delivery of information to the appointing party;
- f) any proposed additions or amendments to the project’s information standard that the delivery team require to facilitate the effective:
 - exchange of information between task teams,
 - distribution of information to external parties, or
 - delivery of information to the appointing party;
- g) a proposed schedule of software (including versions), hardware and IT infrastructure the delivery team intend to adopt.

CEN/TR 17654:2021 (E)

- 6.5 High-level responsibility matrix
- 6.6 Project’s information production methods and procedures
- 6.7 Project’s information standard
- 6.8 Schedule of software, hardware and IT infrastructure

Structure of guidance text

The five paragraphs format;

1. Plain language explanation of what the concept is.
2. Explain the concepts value adding.
3. How to complete the template in order to comply with the minimum requirement in ISO 19650-2.
4. Examples with explanatory text of what the information can be.
5. Further considerations. What can be provided in extension to the minimum required information.

5.4.2 Project's information standard

The project's information standard describes project-specific criteria to support the consistency and exchange of information required for the project. When establishing the project's information standard, the following should be considered: Requirements to level of information need, the use of open BIM standards, the means of structuring and classifying information, information formats needed for further use of information in later project phases and for asset operation etc.

These considerations ensure that meaningful, reliable and consistent data are provided by the project. This information is the basis for informed decision-making.

They should prescribe what is required for information exchanges, how information is structured and classified, how to assess if the information is to the correct level of information need, and how the information will be used in operation, including who will be using the information if this is known. The project's information standard should not specify the methodology for the production of project's information. All information should conform to the project's information standard before changing status in the CDE.

EXAMPLE Acceptance criteria can be stated in the EIR or reference by URL to the documentation that defined the criteria. *LinearUnits: Millimetres, AreaUnits: Squaremetres, VolumeUnits: Cubicmetres, CurrencyUnit: Euros; URL link [Project Standard Units]*

For more information, refer to EN ISO 19650-1:2018, 11.3. Information quality and for a recommended practice for model, object naming and user-defined properties as part of appointing party's project's information standard see Annex D.

The Annexes

Annex A (informative) EIR and BEP summaries and templates supporting EN ISO 19650 2:2018

- Table
- Starting point

Annex B (informative) Project examples

- Document (A4)
- Spreadsheet
- Diagram
- Relational database (no example provided).

Annex C (informative) Information delivery planning

- Detailed responsibility matrix
- Task information delivery plan
- Master information delivery plan

- Simple example - spreadsheet
- Medium complex example - Gantt chart and schedule
- Complex example - database

Annex D (informative) Recommended practice for project’s information standard

- Examples of project’s information standard

Scope: What's on and out

	Invitation to tender EIR	Tender response pre-appointment BEP	Appointment BEP
In scope	5.2.1 Appointing party's exchange information requirements a) information requirement b) level of information need c) acceptance criteria d) supporting information e) information delivery dates	5.3.2 Delivery team's (pre-appointment) BIM execution plan a) information management functions b) information delivery strategy c) federation strategy d) high-level responsibility matrix e) project's information production methods and procedures f) project's information standard g) schedule of software	5.4.1 Confirm the delivery team's BIM execution plan 5.4.3 lead appointed party's exchange information requirements
Out of scope	5.2.4 Invitation to tender information – the relevant reference information and shared resources (within the project's common data environment) – the tender response requirements and evaluation criteria (if applicable) – the project's information standard and (within the project's common data environment) – the project's information production methods and procedure (within the project's common data environment) – the project's information protocol	5.3.7 The delivery team's tender response – capability and capacity assessment summary – mobilization plan – information delivery risk assessment	5.4.6 Lead appointed party's appointment documents 5.4.7 Appointed party's appointment documents
Out of scope although included in Annexes	5.1.4 Project's information standard examples in Annex D in this document		5.4.2 Delivery team's detailed responsibility matrix 5.4.4 Task information delivery plan(s) 5.4.5 Master information delivery plan

What we delivered

What we should have delivered

How this looks in a project...

Information Management Plan – Accordance to ISO 19650

Introduction:

GDA developed the 'Information Management Plan' as a tool for managing information within the project in accordance with ISO 19650-2.

This plan gathers together all elements of ISO 19650-2 on the production and management in a single Excel workbook, as a single place for the delivery team (design team/works contractor) and GDA to work together.

The plan is a record of relevant information and the agreed responsibility and procedure for the specific project and should be the 'goto' document to understand all Information Management elements of the project. It should be considered a 'live' document that shall be updated by the delivery team during the stages in particular the deliverables schedule and risk register.

Grangegorman Campus IPMP – Information Management Plan – Guidance

Project's information production methods and procedures

Example: Process Map

Capital Works Management Framework have standard deliverables

Project Stages			Capital Works Management Framework					
Appraisal	Capital Appraisal		Main Project Processes					
Approval in Principle			Project Management	Design Activities (Building)	Design Activities (Civil Eng.)	Cost Control Activities	Risk and Value Management	Documents for Approval
Stage 1 Planning Initial		Stage (i) Feasibility Study / Preliminary Report	Manage outputs: Project Definition (through 16 N° overall parameters)	Conduct Feasibility Studies Develop Definitive Project Brief	Conduct Preliminary Report Conduct design studies Develop Definitive Project Brief	Conduct cost assessment of Feasibility Studies / Preliminary Report (capital and maintenance costs)	VM: Confirm strategic functional performance Review Feasibility Studies / Preliminary Report options Identify VM strategies Develop functional performance model	Project Management Structure Preliminary Project Brief Preliminary Output Specification Feasibility Study and Cost Plan Design Brief
			Manage technical experts' appointment (if required)	Appoint technical experts (if required) Appoint PSDP (if required)	Appoint technical experts (if required) Appoint PSDP (if required)		RM: Identify and assess risk relating to the Project Execution Plan Develop high-level Risk Management Plan	Final Output Specification Definitive Project Brief Project Execution Plan Risk Management Plan
		Stage (ii) Design	Project Review 1: Confirm approval for design expenditure (Report to Sanctioning Authority and await approval prior to proceeding)					
			Manage procurement strategy Manage design consultant appointment Manage assessment of output requirements	Appoint Design Team / Design Team Leader Assess output requirements	Appoint Design Team / Lead Consultant Develop design standards Assess output requirements	Check / assess budget	VM: Consider VM in relation to procurement strategy RM: Identify risk in relation to procurement Agree risk allocation	Definitive Procurement Strategy Contract Type Proposal Project Team Selection Report
Stage 2 Planning Developed		Project Review 2: Confirm requirements; review procurement strategy (Certify compliance to Sanctioning Authority; and proceed after agreed period provided no queries / hold from Sanctioning Authority)						
		Manage Outline Design process	Develop Outline Sketch Scheme Appoint PSDP (if not appointed earlier)	Develop Preliminary Planning Appoint PSDP (if not appointed earlier)	Develop Outline Cost Plan	VM: Consider VM in relation to Outline Sketch Scheme / Preliminary Planning RM: Consider RM in relation to Outline Sketch Scheme	Outline Sketch Scheme (Building) Preliminary Planning drawings (C. Eng.) Outline Cost Plan	
		Project Review 3: Assess project design and Outline Cost Plan (Certify compliance to Sanctioning Authority; and proceed after agreed period provided no queries / hold from Sanctioning Authority)						
		Manage Developed Design process Manage procurement process	Develop Developed Sketch Scheme Prepare submission for statutory approval	Continue Preliminary Planning Prepare submission for statutory approval	Develop Developed Cost Plan Develop Whole Life Cost Appraisal	VM: Carry out value engineering Assess buildability of the design Consider VM in relation to Detailed Sketch Scheme RM: Identify residual risks Consider RM in relation to Detailed Sketch Scheme Suitability assessment of contractors	Developed Sketch Scheme Developed Cost Plan Statutory Approval Submission	
		Project Review 4: Assess project prior to statutory approval (Report to Sanctioning Authority and await approval prior to proceeding)						
		Manage statutory submission process	Submit for statutory approval Review statutory approval outcome	Submit for statutory approval Review statutory approval outcome	Review Developed Cost Plan	VM: Review any planning conditions for value management impact. RM: Review any planning conditions for risk impact.	Developed Cost Plan (reviewed)	
		Project Review 5: Assess outcome from statutory approval (Certify compliance to Sanctioning Authority; and proceed after agreed period provided no queries / hold from Sanctioning Authority)						
		Stage (iii) Tender	Manage the Detailed Design Process	Develop Detailed Design (not design-and-build) Prepare tender documents	Develop Detailed Planning (Design) (not design-and-build) Prepare tender documents	Conduct Detailed and Pre-Tender Cost Checks and Whole Life Cost Update in advance of preparing tender documents	VM: Review suitability assessment of contractors for VM potential RM: Review suitability assessment of contractors for risk impact	Tender Documentation Detailed Pre-tender Cost Check Whole Life Cost Update Contractor List Selection
Project Review 6: Approve detailed design solution; review pre-tender cost check; review risk (Report to Sanctioning Authority and await approval prior to proceeding)								
Manage the Tender Process			Issue tender documents Assess tender returns Recommend successful tenderer	Issue tender documents Assess tender returns Recommend successful tenderer	Develop Tender Cost Analysis Develop Tender Report	VM: Assess tender returns for VM potential RM: Assess tender returns for risk impact	Tender Assessment Criteria Tender Analysis And Report Contractor Recommendation	
Project Review 7: Review tender returns in advance of awarding the contract (Report to Sanctioning Authority and await approval prior to proceeding)								
Stage 3 Implementation		Stages (iv) Construction & (v) Handover	Manage the implementation / construction process Manage change control Manage contract	Develop Detailed Design (Design and Build) Implement design	Develop Detailed Planning (Design and Build) Implement design	Manage change control for costs Prepare final account	VM: Carry out value engineering (for design and build projects only) RM: Manage residual risk Manage construction risk	Various contract management reports
Stage 4 Review			Manage the Project Review	Conduct design review	Conduct design review	Develop Analysis of Outturn Cost	VM: Evaluate value achieved RM: Evaluate the risk management and risk mitigation process Consider operational risk reviews	Project Outturn Review

Design and Build

Final thoughts:

CEN/TR 17654:2021;

Can help **People** better understand ISO 19650

Can flexible enough to suit **People's** projects

Can help **People** progress their approach to Information Management

GDA's Information Management Plan;

Is focused on giving **People** the information they need

Is a pathway for **People** to improve Information Management

Is reducing **People's** work reproducing standards documents as project specific

Culture beats technology

**We don't have all the answers.
But, we are starting to ask better questions.**

5th CitA BIM Gathering Virtual Conference

21 - 23 September 2021
