OVG Manchester

BHoM – Buildings and Habitats Object Model

- Open-source model for project architecture, co-creation and planning.
- Collaborative computational development project
- <https://github.com/BHoM/documentation/wiki>

Average Value of UK disputes 2020 = **US\$38.6m**

Disputes Top 2 Causes 2020:

1. Owner/contractor/subcontractor failing to understand and/or comply with its contractual obligations
2. Owner-directed changes

BUT...WHAT IS A CONTRACT ANYWAY?

**“A contract is written between two parties
who don’t trust each other”**

A fair allocation of risk and reward:

“A contract is a road map that shows where you want to go and how you are planning to get there”

- Which bits are binding and enforceable?
...Why does that matter?
- May not be in writing
- Agreement –v- legally binding agreement =
Not every agreement is a contract

Get professional advice!

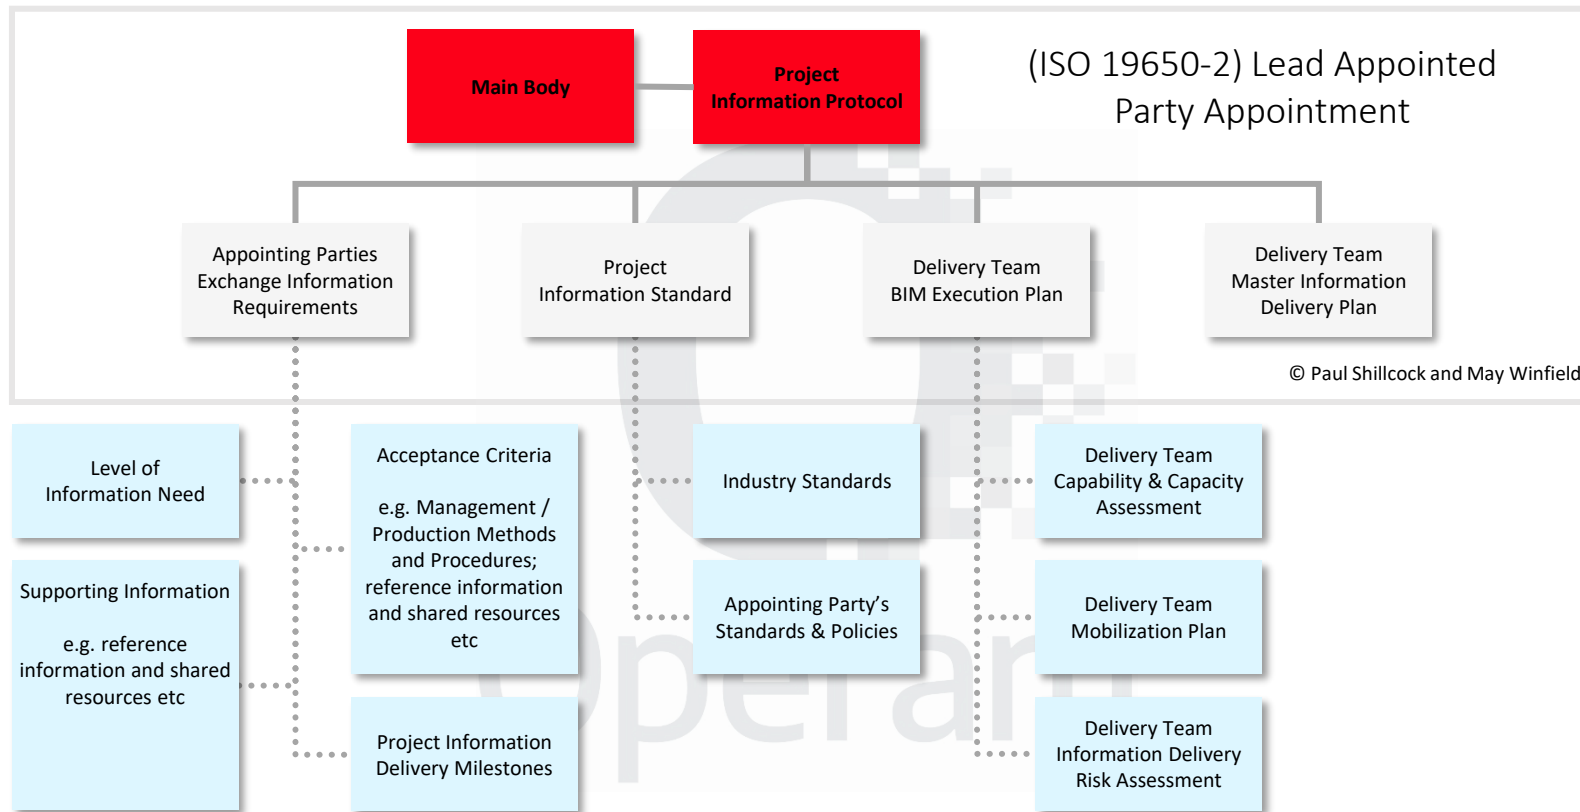

Expected BIM Contractual Documents

- Employer's/Exchange Information Requirements
- BIM Execution Plan
- Master Information Delivery Plan
- BIM Protocol

Appointment Documents

Appointment Schedules

Referenced Documents

Appended
Referenced

The purpose of this diagram is to show the relationship between the various information management documents within an appointment and is not intended to be legal guidance.

Not all contracts have schedules; for example the schedules contents would be contained in NEC3/4 Z-clauses and Works Information/Scope instead. **Legal advice should always be sought when preparing appointments.**

ISO19650 – compliant Information Protocol

<https://ukbimframework.org/standards-guidance/>

Information protocol to
support BS EN ISO 19650-2
the delivery phase of assets

Published by

UK BIM
FRAMEWORK

Just one page to fill in: Information Particulars

Who and What

All documents
relevant to the Parties

Some may not be
relevant (e.g. TIDP)

Update/Complete
over time

Clear Up Confusion:

Are You *A* or *B* AND
Are you *C*, *D* or *E*

A. Appointor (doing the appointing/paying)

B. Appointee (getting appointed/paid)

C. Appointing Party

D. Lead Appointed Party

E. Appointed Party

Appointment-agnostic

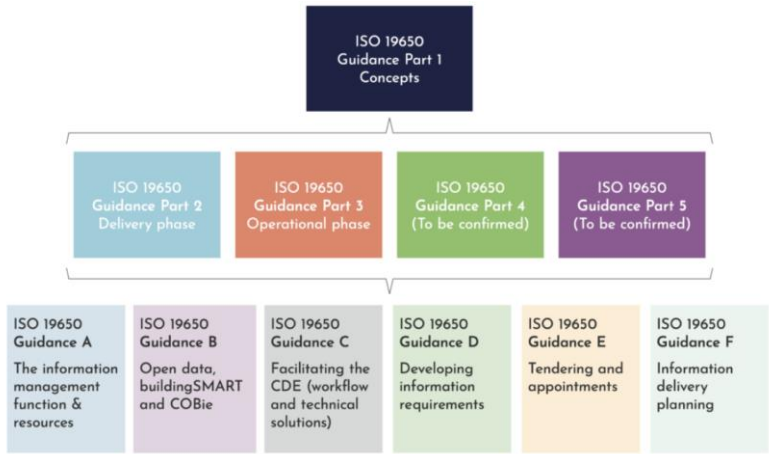

Good for standard forms, bespoke,
two-party, alliancing and multi-party

*See Guidance: one simple clause to ensure
clarity if used for a multi-party appointment*

Read the Complimentary Guidance

<https://ukbimframework.org/standards-guidance/>

Retrievable information within files-based TIDP	
Information Container Name	Information Container Description
All party wall interface detail	Detail of the north party wall at a scale of 1:20
Partition plan for the whole first floor	Plan defining partition types and acoustic ratings
Fire strategy for the first floor	Fire strategy defining wall and door fire ratings, equipment and escape routes

Figure 13: Non-file-based TIDP approach

3.5.2 Master information delivery plan vs detailed responsibility matrix

The detailed responsibility matrix supports the production of the TIDPs and MIDP. It informs the scope requirements of each task team so that they can adequately define their outputs as part of their TIDP.

For example, a detailed responsibility matrix may define that the “above ground drainage” information is the responsibility of the drainage contractor but the “below ground drainage” is the responsibility of a civil engineer. This communicates to the drainage contractor that their scope is above ground drainage only. When this drainage contractor develops their TIDP to detail out the specific deliverables such as “drainage layout plans”, they will be doing this just for above ground drainage. The MIDP compiled by the lead

3.3 High level responsibility matrix contents

As part of their tender response, the prospective lead appointed party filters out the information deliverables they expect to fulfil in consideration of the appointing party’s exchange information requirements. This ensures there is no overlap with other delivery teams and clarifies what, at high level, they expect to deliver. For example, a main contractor who is tendering for construction works, and has some contractor design portion works within their scope, needs to make it clear where their scope starts and ends, especially if there is some overlap with another lead appointed party.

The structure of the high level responsibility matrix is often determined by the agreed container breakdown structure as noted in section 3.1 but now includes the WHO.

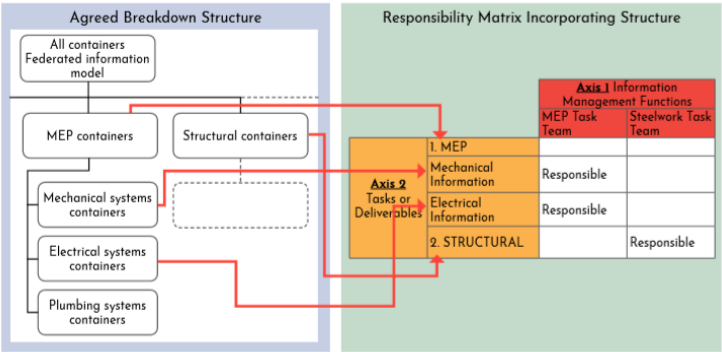

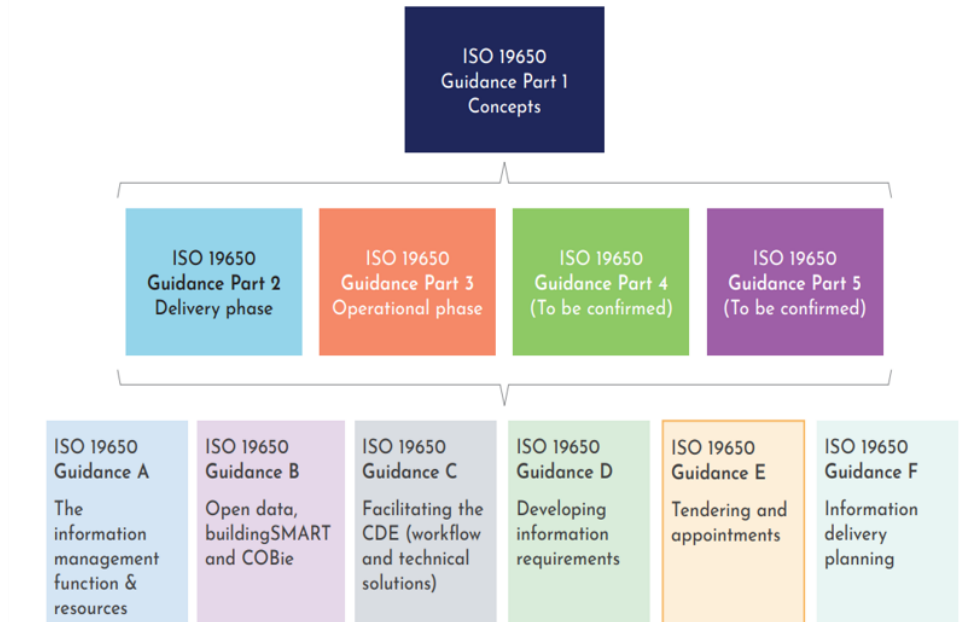

Figure 5: Example of a high-level responsibility matrix incorporating agreed breakdown structure

File-based TIDP	
Information Container Name (File ID)	Information Container Description
HC101-SSI-ZZ-DR-A-0001	Party Wall Interface Detail
HC101-SSI-ZZ-DR-A-0002	Partition Setting Out Plan - First Floor
HC101-SSI-ZZ-DR-A-0003	Fire Strategy Layout - First Floor

Figure 12: File-based-only approach to listing information containers within a TIDP

Start with a List to Avoid Gaps

What

- Process
- Tasks
- Could go wrong

Who

- Should bear risk/liability
- Should mitigate

How

- Process
- Records
- Insurance
- That's their problem

Size

- Unlikely or likely risk
- Large or small loss

3 Key Issues for today:

Copyright

Risk Allocation

Responsibility

Copyright and Intellectual Property

Objects

Existing and
New Data

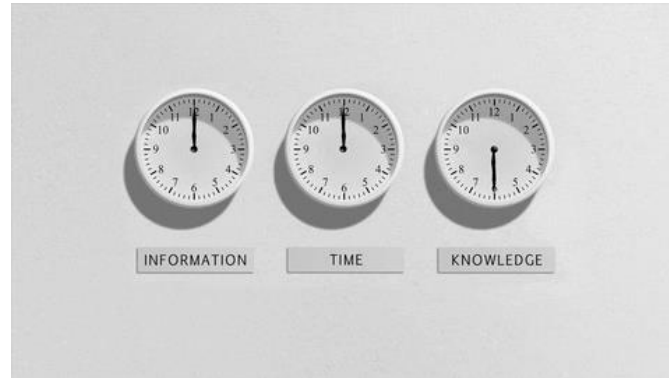

Models

Risk Allocation

Software/
Interoperability

Integrity of Data/
Checking of Data

Process, e.g.
Programme, File
Naming and Format

Contractual responsibility

Terminology

Scope

Deliverables

Final Thoughts

Whose fault is it anyway

– some things to think about:

- Who agreed to what
- Are there any gap/discrepancies/scope for argument
- What happened – who caused it

= Importance of clarity and records
