EVENT FOUR

Effective Construction Project Management:
Digital skills to drive quality outcomes, foster innovation and project success

Why is digital such an important skill for construction project managers in 2024?

The role of a digital project manager in construction is to ensure that all the necessary deliverables for a project are completed and handed over on time and on budget. In more recent years, project managers need digital skills to ensure projects are delivered on time and to the quality expected of their clients. These skills include Digital Construction/BIM- related project deliverables in collaboration with other disciplines/departments and external partners, whilst contributing to their employer's digital strategic direction. Today construction project managers need to be aware of the digital tools that can assist in delivering buildings more efficiently leading to greater client satisfaction and improved project outcomes.

What are the skills required?
Examples of technical and soft skills associated with Construction Project Management include:

Technical Skills

Proficiency in BIM

Construction Management Software tools and techniques

Knowledge of building regulations and control

Cloud computing and data storage

Data Science and Analytics

Broader digital construction tools

Data Security

Process Re-engineering

Soft Skills

Communication

Project Management

Decision making

Leadership and Delegation

Planning and organisation

Problem Solving

Innovative Mindset

Continuous Learning
