

The Role of Laser Scanning in Modern Digital Construction

CitA BIM Gathering Nov 6th 2025

Introduction

Everest Technical Services was established in 2018 by highly talented and experienced AEC professionals to harness **technology, design, and construction expertise** to deliver prime projects, on optimised budgets and accelerated timelines.

As a technology-driven company, we combine **construction data** and extensive building design knowledge to enhance **virtual design** and construction, offering precise and actionable insights. Our **BIM solutions** integrate cutting-edge technologies and streamline workflows, from concept design to Digital Twin deployment.

Based in **Meath, Ireland**, and with subsidiaries in the **UK, Israel, India and UAE**, our skilled AEC professionals serve diverse sectors. We've expanded rapidly, collaborating with prominent names in the design & construction industry across **EMEA & USA**.

Everest is your **ideal partner** for achieving business objectives in the evolving design and construction landscape, delivering unmatched **quality and client satisfaction**.

Hardware

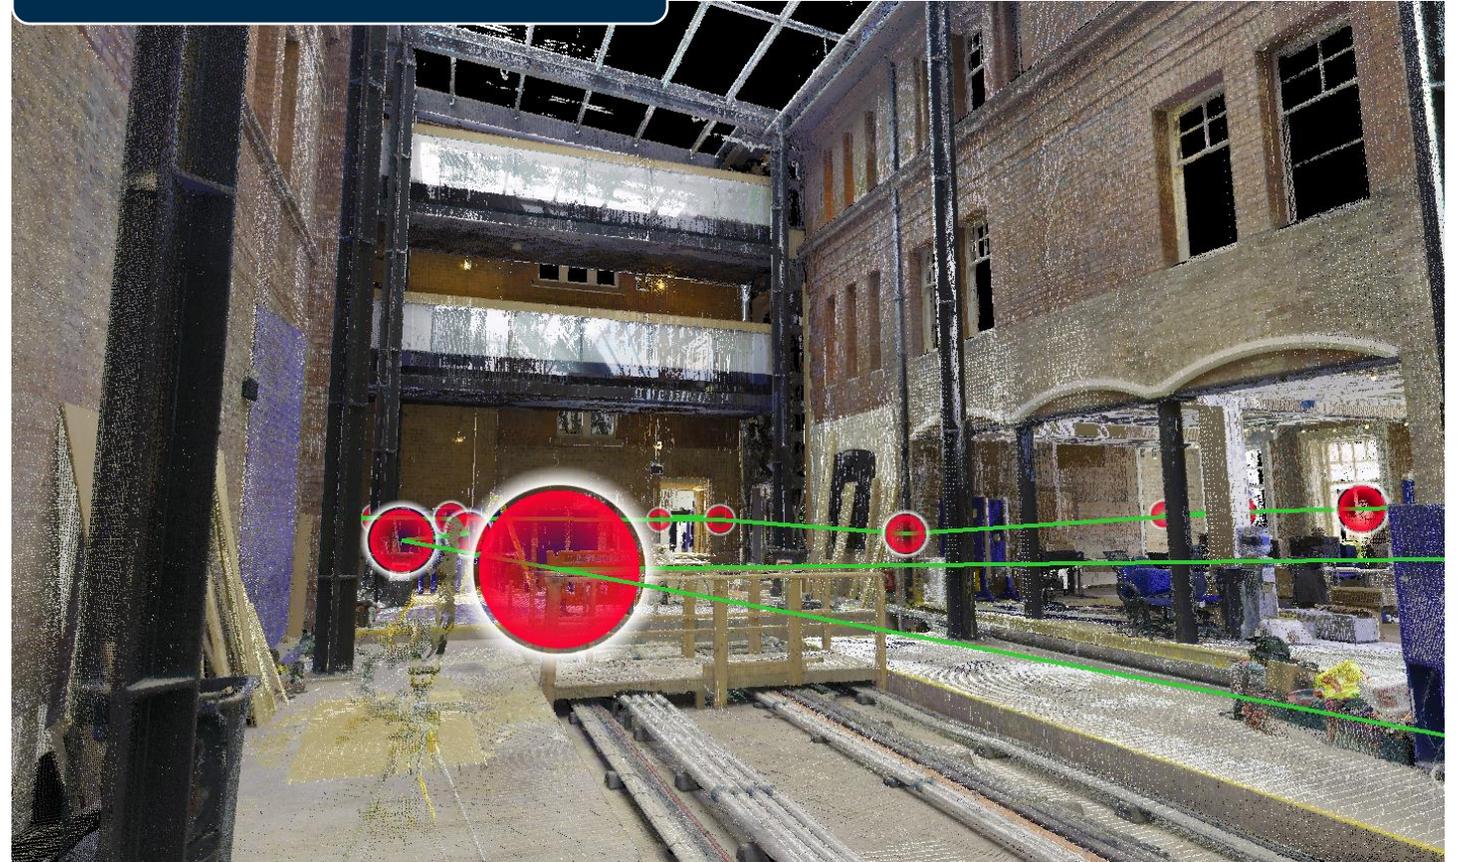

Leica RTC 360

- 360° x 270° full dome coverage
- 130-meter range
- 2 million points per second
- 3 resolution settings
- 3 cameras collecting panoramic images

Software

Point Cloud in Register 360+

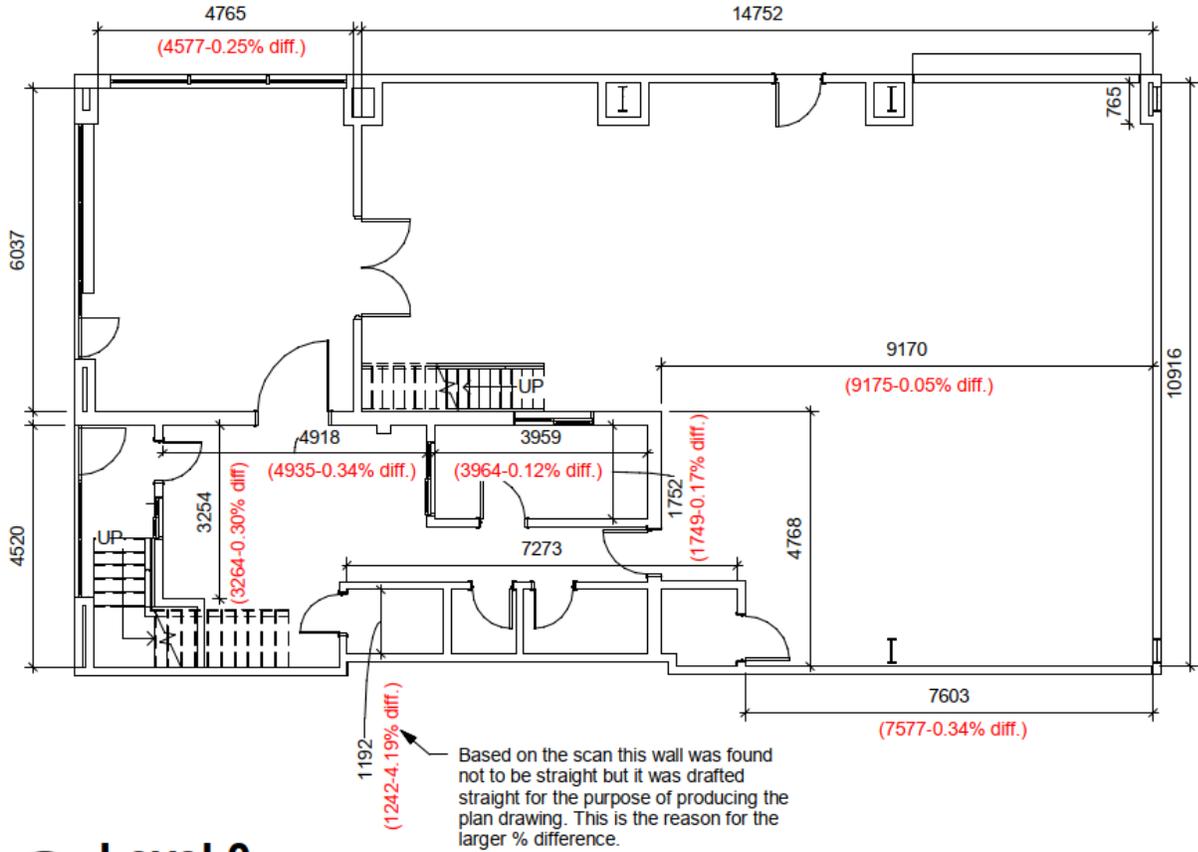

Equipment Comparison

	FARO Orbis	NavVis VLX 3	Leica BLK360	Matterport Pro3	GeoSlam ZEB Horizon
Accuracy:	+/- 5mm @ 10m	+/- 5mm @ 10m	+/- 6mm @ 10m	+/- 20mm @ 10m	+/- 1-30mm @ 10m
Uses:	Construction Software	Construction Software	Virtual tours, Software Aid	Virtual tours for Real-Estate, Marketing	Field scans, Façade scans (high rise)

Equipment Comparison

1 Level 0
1 : 100

Scan Dimensions VS Manual Measurements

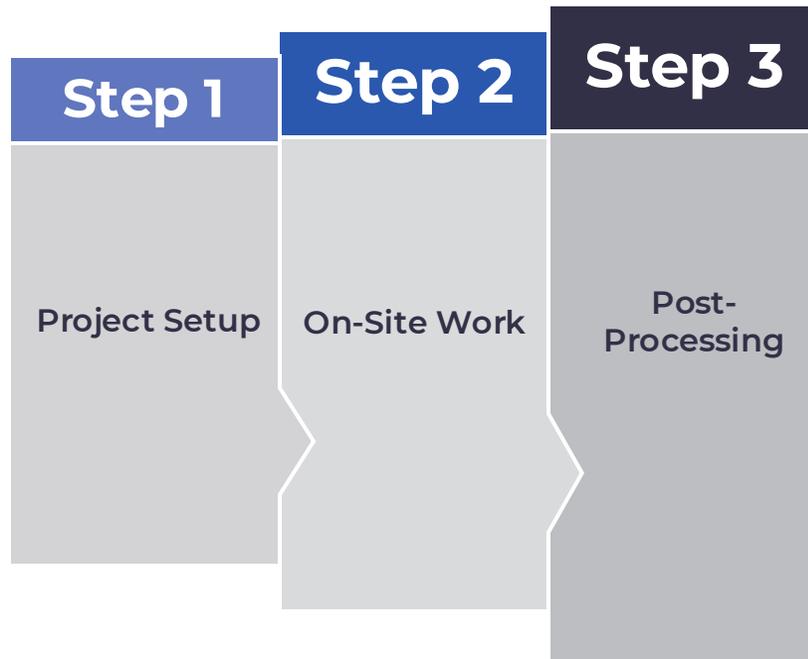

Things to consider:

- Accuracy of tools
- Modelling software limitations
- Confidence in best methods used

Accuracy*	Angular accuracy 18" Range accuracy 1.0 mm + 10 ppm 3D point accuracy 1.9 mm @ 10 m 2.9 mm @ 20 m 5.3 mm @ 40 m
Range noise**	0.4 mm @ 10 m, 0.5 mm @ 20 m

The Scanning Process

1. Project Setup:

- review inputs
- establish specific requirements
- determine settings and coverage
- choose appropriate equipment

2. Field Work

Different types of spaces:

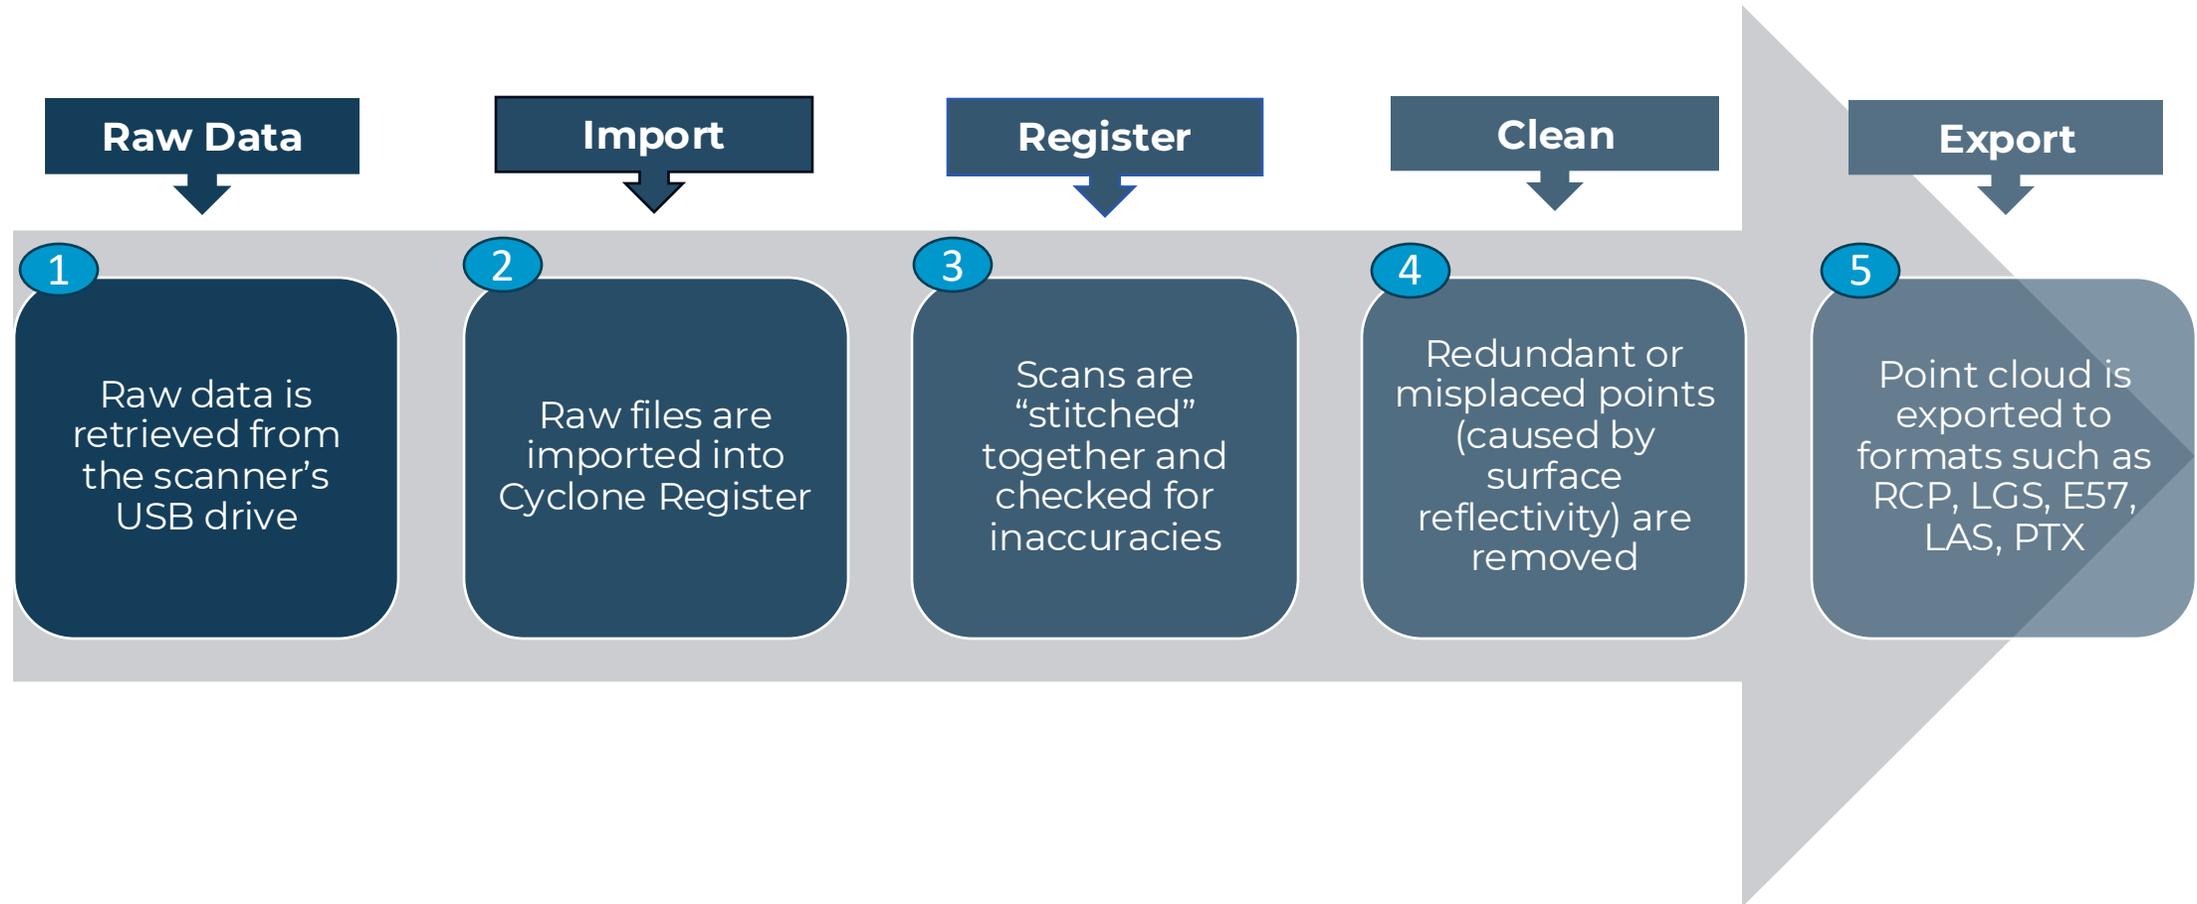

- 1) Open-plan
- 2) Ceiling voids
- 3) Plantrooms

Challenges:

Glass surfaces, vibrations, congested areas, safety regulations, etc.

3. Data Processing

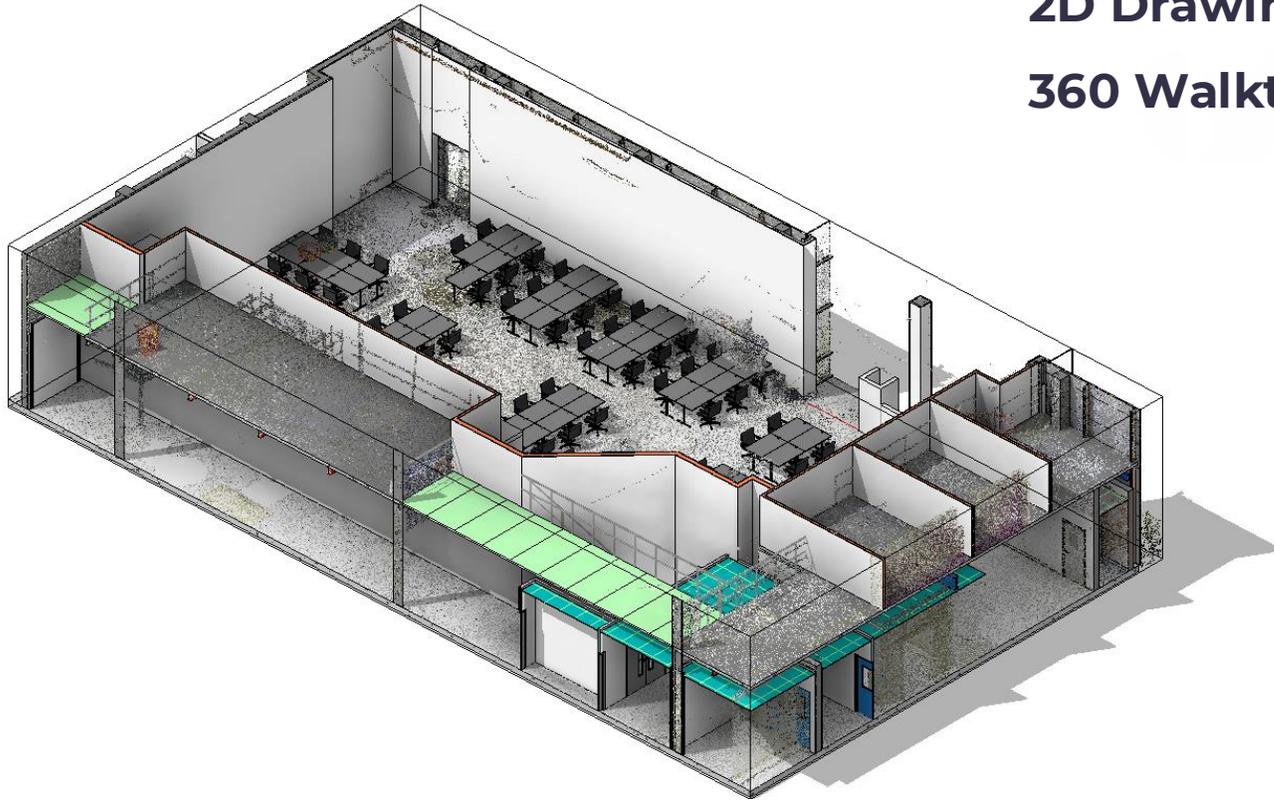

Point Cloud Conversion to Outputs:

3D Models

2D Drawings
